

Tasmanian Irrigation Pre-Season Newsletter September 2026

A message from Cher Bartlett, General Manager, Customer and Operations

Hi everyone, I'm pleased to introduce myself as Tasmanian Irrigation's new General Manager, Customer and Operations. I've joined at an important time as we prepare for the 2026–27 irrigation season and continue working with irrigators to deliver safe, reliable and customer-focused water services.

I lead the people at Tasmanian Irrigation who are responsible for water delivery, customer service, asset management, dam safety, hydrology, engineering and environmental compliance.

My focus is simple: reliable water delivery, responsible scheme management and clear communication with customers.

I look forward to building strong relationships with customers, Irrigator Representative Committees and scheme communities, and to hearing directly about the issues that matter most to you.

Thank you for the welcome I have already received from those of you I've met so far. I look forward to meeting more of you and working with you through the season ahead.

Preparing for the 2026–27 irrigation season

Our operational schemes are ready for another busy irrigation season, with maintenance, inspections, commissioning and operational planning undertaken through winter and early spring.

These works have included targeted maintenance, critical spares replacement, telemetry upgrades, pump station works, flow meter replacements, dam surveillance and other planned improvements. This work supports reliability, manages risk and helps ensure assets are maintained responsibly over their operating life. The Asset

Some schemes have already started the season, while others will open progressively depending on seasonal conditions, storage levels, scheme rules and customer demand.

Please check scheme-specific information, including confirmed opening dates, charge rates and operational notices, on the [scheme pages on the Tasmanian Irrigation website](#).

Seasonal outlook and dam storage levels

While rainfall deficiencies eased in some parts of the State over winter, warmer conditions and pressure on water resources remain possible in northern, eastern and southern regions as we start a new summer irrigation season.

Recent rainfall has enabled opportunistic harvesting, leaving most major dams with strong storage levels. Current information on water levels for Tasmanian Irrigation dams is available on the [Dam Dashboard](#) and is updated daily.

With each scheme operating under different catchment, storage and supply conditions, irrigators are encouraged to plan early, review expected demand, understand available entitlements and consider [water trades](#) ahead of the peak of the season to meet your needs. Read more below about water trading.

please see our latest [Operations Quarterly Report](#).

Financial sustainability and annual charges

Tasmanian Irrigation operates as a cost-recovery business, focused on providing reliable water delivery at the lowest sustainable cost of service.

Cost pressures continue across labour, materials, energy, insurance, compliance and asset renewal, while the business continues to strengthen long-term financial self-sustainability.

Annual charge information for 2026–27 is available through individual [scheme pages on the Tasmanian Irrigation website](#). Charges may include operations and maintenance, the Asset Renewal Levy, storage, variable water use and excess or out-of-season charges, depending on scheme rules and by-laws.

We understand that pricing information can be complex. Tasmanian Irrigation is continuing to improve how financial and operational information is presented, with the aim of making it clearer, more transparent and easier for irrigators to understand.

Water trading and efficient use

[Water trading](#) can help irrigators manage seasonal demand and make better use of available water within schemes. If you expect to need more water, or have water available, please consider trade options early and submit trades for approval before water is taken where possible.

Trading early helps reduce excess water use, supports efficient scheme utilisation and gives irrigators more flexibility as conditions change. Fixed charges apply to the holder of the irrigation right on the first day of the season, and any private agreement for another party to pay these charges must be managed between the parties.

Trades must be completed no later than 30 days before the end of the season. Later trades may not be approved, as they can affect end-of-season billing and

Please monitor your water use, plan ahead, consider trading before peak demand periods, contact us if you need help with trading, and keep your account up to date.

Your voice matters

Tasmanian Irrigation will soon be inviting customers to take part in our annual customer research survey.

Now in its third year, the survey helps us understand what we're doing well, where we can improve, and the issues that matter most to your business. Your feedback provides valuable insights that help us enhance our services, improve communication, and better meet the needs of irrigators across our schemes.

We appreciate the time customers take to participate and look forward to sharing the results with irrigators once the research is complete.

More information will be available soon.

Supporting sustainable irrigation with Farm WAPs

[Farm Water Access Plans \(Farm WAPs\)](#) help ensure Tasmanian Irrigation water is used in the right areas and in a way that supports sustainable irrigation and protects soil, waterways, water quality and biodiversity.

Before the season starts, please check that your Farm WAP reflects your intended irrigation activity and contact Tasmanian Irrigation if you are planning changes to

Thank you for following your Farm WAP, keeping records up to date and working with us on any audits, reviews or updates to support responsible irrigation.

Staying informed

Scheme-specific newsletters, pricing information, dam levels and operational updates are available on individual [scheme pages on the Tasmanian Irrigation website](#).

For questions about your scheme, water delivery, trading, Farm WAPs, invoices or operations, please contact Tasmanian Irrigation.
